

Sensory Processing in ADHD

Stanford University researchers are looking for families with **children between the ages of 4 and 9 years** to participate in a study examining how children with developmental disorders process sensory information.

Our study involves two or more visits, which include a parent interview, parent questionnaires, a behavioral assessment, and a brief brainwave recording (EEG) session.

The entire procedure is non-invasive and safe, and all participants' information will be kept confidential.

We are currently looking for:

- **Children with ADHD between 4 and 9 years of age**

Please feel free to call or email us with any questions, or to schedule a visit!

(650) 725-2440
